VitraHaus – Weil am Rhein

The VitraHaus consists of 12 individual structures, almost all of which are glazed at the front. Specially made slanted curtains serve to regulate the light.

Starting Point

The large windows of the new VitraHaus allow for a lot of light and sunshine to flood the rooms. Moreover, you can see through practically the entire building.

Solution

Motorized slanted curtains, a special version of Metric Slope III, were mounted to ensure glare protection in the «playhouse»-like slanted windows.

In addition to this, curtains (Dimmer with a back lining in Universal) mounted in the middle of conference and meeting rooms ensure privacy and also absorb sound. And on the window fronts, anti-glare curtains protect against too much light and prying eyes.
