

Office

UEFA – Nyon

The European football association and Création Baumann have worked as a team to kit out the former's premises in Nyon with the best possible visual shielding and glare protection, and improved the level of protection against noise.

Starting Point

This building's circular shape and glazed walls allow the energy of the sun to be exploited to the full. Whenever possible, therefore, the building will rely on natural light alone.

In summer, the building will be protected against solar radiation by overhanging roofs, the depth of which vary depending on their orientation.

Solution

Curtaining for the external facades was chosen to ensure optimum protection against glare combined with maximum transparency.

A heavy satin material was preferred for the offices, so that the window frontages could be closed off and the users isolated from the outside world. The Lerida fabric also improves the noise absorption level.

Textiles Used

LERIDA IV

Article-Number: 0002945

Use: Dense curtain fabric

Number of colors: 37

Material: 100% Flame retardant (Trevira CS)

Fabric width: 150 cm/59 inch/1.64 yard

Weight: 194 g/m²

Sound absorption: α_w 0.70

Abrasion resistance: 36'000 Martindale

Pilling: 3-4

Light fastness: see downloads
