MCBA Cantonal Museum of Fine Arts

A 3-story monolith reflects the place's industrial character, offering new exhibition space for modern art.

Starting Point

On the side of the railway, the museum has a closed facade with hardly any windows to protect the displays from natural light. The building's north side is more open.

Solution

The high and bright foyer has semi-sheer curtains for glare protection to regulate the light.

The blackout fabrics with their high level of sound absorption ensure pleasant room acoustics in the auditorium.
